**TOTALLY DERMA USP's:** \*contains **THERAPEUTIC** doses of **EACH** ingredient (no other competitor has this) – this is the equivalent to 26 standard capsule alternatives.

- Contains **patented Arthred®** enzymatically hydrolysed bovine collagen that biochemically resembles human collagen (Marine collagen doesn't) therefore the body recognizes it and utilizes it internally.
- Contains the highest levels of Hydroxyproline and Proline than any other Marine collagen (these are the essential building blocks for collagen synthesis)
- Contains a more complete spectrum of collagens (type I, II & III) Totally Derma is enzymatically processed 2kDa molecular weight, 95% bioavailable via the blood vessels
- Contains **patented Synovoderma** Hyaluronic Acid (therapeutic dose of 210 mg.) Hyaluronic Acid stimulates fibroblast proliferation within the collagen matrix. Moreover, HA stimulates collagen growth as well as directly consuming hydrolysed collagen. Therefore products with no HA only do half the job that Totally Derma does with regard to stimulating collagen and HA.
- Contains highest levels of antioxidants, anti-inflammatories and minerals to support, enhance and promote collagen and HA as well as providing additional benefits.
